Mr. Alan Cable  
A.C.E. Production Technologies  
3010 N. First St.  
Spokane Valley, WA 99216

Dear Alan,

As you know, ACC Electronix, Inc. has been using your product for about two years now. We began with your 102 series and moved up to the 104 about this time last year. The initial learning curve was very short and the programming process was easy to understand. The mix of product styles has required us to be sometimes creative and the people at A.C.E. ProTech have always been extremely helpful and responsive.

Our machine has been used as a "mini-2.5 inch wide wave" for literally thousands of boards using a special nozzle created for us. It has also been a key to efficiently soldering a variety of projects that might be characterized as "normal" for selective solder functions. It is regularly used in both Sn/Pb product and RoHS-compliant product. The pot change-out process to accommodate the different technologies is simple and the dual fluxer nozzles eliminate what could be another time-consuming step in setup. Throughout our ownership, these machines have performed well and the product quality has been reliable and repeatable.

I just thought you might like to hear that we have been pleased with your product and would not hesitate to invest again should the need arise.

Sincerely,

A handwritten signature in black ink, appearing to read 'Greg Meyer', written in a cursive style.

Greg Meyer
