Dear Alan,

Just want to let you know how satisfied we are with our purchase of one of your KISS 102 Selective Soldering Machines, which we have now had for eight months. We used to do hand soldering of the through-hole components on boards that had SMT on the bottom side. We no longer have to worry about the variability associated with hand soldering. The KISS machine consistently produces perfect solder joints. Now we do no more hand soldering except for some touch-up. Also, with the 3 inch wave nozzle, we can do wave soldering jobs in-house that we used to farm out.

I want to also thank your people for the excellent training and follow-up support we received, which got us up to speed very quickly. Also, thanks for recommending the On Site Nitrogen Gas Generator which has proven to be very reliable in supplying all the high purity nitrogen we need.

We figure the KISS machine will quickly pay for itself. I highly recommend it to any electronic assembler who wants to speed up production and minimize unreliable hand soldering.

Best regards,

Ron Mueller
President
